Howard Levine

**Affect, Representation and Language:  
Between the Silence and the Cry**

The terms "unrepresented" and "unrepresented states" are increasingly being referred to in psychoanalytic discourse, without our having established a generally agreed upon consensus about their definition, use or meaning. While these particular designations were never used by Freud, a careful reading of his work reveals them to be qualities that characterize the initial state of both the drive and perception. The chapters in this book attempt to place these terms in a clinically useful, metapsychological perspective by reviewing their conceptual origin in Freud and examining their elaboration and clinical relevance in the work of Bion, Winnicott and Green.
